Exploratory Data Analysis (EDA Basics)

Assignment

PW SKILLS

Dataset: House_Price_India Dataset

Problem Statement – House Price Analysis

You are a data analyst working with real estate data. Your task is to analyze the dataset to understand:

- Individual variable behavior (Univariate Analysis)
- Relationships between variables (Bivariate Analysis)
- Business insights from relationships (Interpretation)

Submission Requirements

Students must submit:

1. Google Colab Notebook
2. Answers with code + explanation
3. Proper interpretation for each question
4. Final insights (minimum 5)
5. Clean and structured code

Assignment Tasks

Instructions

1. Load the dataset
2. Perform basic checks using:
   - df.info()
   - df.describe()
3. Handle missing values (if any)
4. Solve the questions using Pandas operations
5. Provide interpretation for each answer

Assignment Questions

Q1. What is the average, median, and standard deviation of house prices?

Q2. Which number of bedrooms is most common?

Q3. Check if the price data is skewed.

Q4. What is the average price for each number of bedrooms?

Q5. What is the relationship between living area and price? (Use : Area without Basement).

Q6. Identify any anomalies where houses have high prices but low areas.

Q7. Compare average price based on number of floors and houses with or without waterfront.

Q8. Identify the minimum and maximum house price. What does this indicate?

Q9. Which location (zipcode/area) has the highest average price?

Q10. Write at least 5 insights from your analysis.
